

Product description

S991023 CS-SC2/FR (package 2)

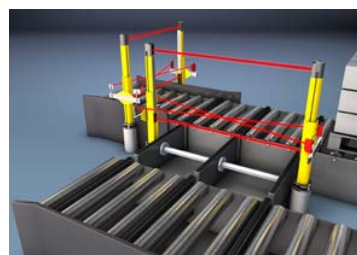

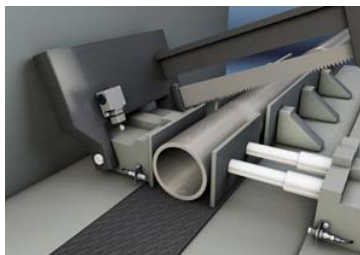

Risk assessment of existing machines (small)

Our expert prepares a customer-specific questionnaire for risk assessment of your machine based on ISO 12100 or, if required, in accordance with existing type C standards, analyzes the point of operation together with the personnel on site and assesses the existing risk. On the basis of this assessment, practice-oriented guarding proposals are elaborated in line with the hierarchy of measures. A report, e.g. in the form of an Excel list, is included in this package.

Included in the package:

- On-site safety-related consultation lasting 1 day (max. 8 hours) including traveling expenses within Germany
- Risk assessment of up to:
 - o two mechanical points of operation (e.g. clamp or carriage)
 - o one complex mechanical point of operation (e.g. robot, loading/unloading area)
- Guarding proposals in line with the hierarchy of measures
- Written documentation of the results with
 - o assessment of the point(s) of operation based on ISO 12100 or, if necessary, type C standards
 - o normative references
 - o binding proposals for suitable measures

Example of points of operation which are considered in package 2 for the life phases "normal operation", "maintenance" and "servicing":

If required, package 2 can be extended in two stages by half a day or a whole day (S991025 CS-SC4/FR).

Subject to modifications and errors.
