A Working distance (WD) [mm]  
 B Short range  
 C Distant range

- The depth of field (DoF) is the range within which the object can move away from or closer to the camera without going out of focus. The depth of field depends on the lens aperture, the distance to the test object, the lens focal length and the pixel size of the camera.
- Please note: During calculation, the double pixel size is used as the permissible blur.

Example: The object should have a WD range of 76 to 225 mm.

150	113	74	221	166

A Working distance (WD) [mm]  
 B Models with low resolution (-M1)  
 C Models with high resolution (-M4)

- The field of view (FoV) is the range in which the sensor can capture its surroundings. It depends on the size of the imager and its resolution, on the focal length of the lens and on the distance of the sensor to the object.

Example: The FoV is 78 x 58 mm for devices with low resolution (-M1) and 152 x 114 mm for devices with high resolution (-M4).
