Scan Engine
1 About this document

1.1 Used symbols and signal words

Tab. 1.1:   Warning symbols and signal words

		Symbol indicating dangers to persons
		Symbol indicating possible property damage
	NOTE	Signal word for property damage
		Indicates dangers that may result in property damage if the measures for danger avoidance are not followed.
	CAUTION	Signal word for minor injuries
		Indicates dangers that may result in minor injury if the measures for danger avoidance are not followed.
	WARNING	Signal word for serious injury
		Indicates dangers that may result in severe or fatal injury if the measures for danger avoidance are not followed.
	DANGER	Signal word for life-threatening danger
		Indicates dangers with which serious or fatal injury is imminent if the measures for danger avoidance are not followed.

Tab. 1.2:   Other symbols

		Symbol for tips
		Text passages with this symbol provide you with further information.
		Symbol for action steps
		Text passages with this symbol instruct you to perform actions.
		Symbol for action results
		Text passages with this symbol describe the result of the preceding action.

Leuze

Tab. 1.3: Terms and abbreviations

CMOS	Semiconductor process for implementing integrated circuits (Complementary metal-oxide semiconductor)
DCR	Image-based code reader (Dual code reader)
DTM	Software device manager (Device Type Manager)
EMC	Electromagnetic compatibility
EN	European standard
FDT	Software frame for management of device managers (DTM) (Field Device Tool)
FE	Functional earth
FFC	Flexible flat cable
FOV	Field of view
GUI	Graphical user interface
HID	Device class for input devices with which users directly interact (Human Interface Device)
IO or I/O	Input/output
IVD	In vitro diagnostics
LED	Light-emitting diode
PLC	Programmable logic controller

2 Safety

This scan engine was developed, manufactured and tested in line with the applicable safety standards. It corresponds to the state of the art.

2.1 Intended use

The DCR50M2/R2-S7 type scan engine is designed as an installation scanner with integrated decoder for all of the most popular 1D and 2D codes for automatic object detection.

Areas of application

The DCR50M2/R2-S7 scan engine is intended especially for the following areas of application:

- Automatic analyzers
- For space-critical code reading tasks
- For installation in a housing or beneath covers

⚠ CAUTION
Observe intended use!
The protection of personnel and the device cannot be guaranteed if the device is operated in a manner not complying with its intended use.
↳ Only operate the device in accordance with its intended use.
↳ Leuze electronic GmbH + Co. KG is not liable for damages caused by improper use.
↳ Read these operating instructions before commissioning the device. Knowledge of the operating instructions is an element of proper use.

NOTICE
Comply with conditions and regulations!
↳ Observe the locally applicable legal regulations and the rules of the employer's liability insurance association.

2.2 Foreseeable misuse

Any use other than that defined under "Intended use" or which goes beyond that use is considered improper use.

In particular, use of the device is not permitted in the following cases:

- in rooms with explosive atmospheres
- in circuits which are relevant to safety
- for medical purposes

NOTICE
Do not modify or otherwise interfere with the device!
↳ Do not carry out modifications or otherwise interfere with the device. The device must not be tampered with and must not be changed in any way.
↳ The device must not be opened. There are no user-serviceable parts inside.
↳ Repairs must only be performed by Leuze electronic GmbH + Co. KG.

2.3 Competent persons

Connection, mounting, commissioning and adjustment of the device must only be carried out by competent persons.

Prerequisites for competent persons:

- They have a suitable technical education.
- They are familiar with the rules and regulations for occupational safety and safety at work.
- They are familiar with the operating instructions for the device.
- They have been instructed by the responsible person on the mounting and operation of the device.

Certified electricians

Electrical work must be carried out by a certified electrician.

Due to their technical training, knowledge and experience as well as their familiarity with relevant standards and regulations, certified electricians are able to perform work on electrical systems and independently detect possible dangers.

In Germany, certified electricians must fulfill the requirements of accident-prevention regulations DGUV (German Social Accident Insurance) provision 3 (e.g. electrician foreman). In other countries, there are respective regulations that must be observed.

2.4 Disclaimer

Leuze electronic GmbH + Co. KG is not liable in the following cases:

- The device is not being used properly.
- Reasonably foreseeable misuse is not taken into account.
- Mounting and electrical connection are not properly performed.
- Changes (e.g., constructional) are made to the device.

Leuze

3 Device description

3.1 Device overview

3.1.1 About the DCR50M2/R2-S7 scan engine

The code reader is based on a scan engine with CMOS imager and integrated decoder for all commonly used 1D and 2D codes such as Data Matrix, Aztec, QR, 2/5 Interleaved, Code 39, Code 128, UPC/EAN.

The many possible configurations of the device allow it to be adapted to a multitude of reading tasks. Due to the device's small dimensions and large reading field, the scan engine can also be used in highly constrained spaces.

Information on technical data and features see chapter 11 "Technical data".

3.1.2 Stand-alone operation

The scan engine is operated as a single "stand-alone" device. It is equipped with a 12-pin FFC connector for the power supply electrical connection, the interface, the trigger input, and the switching output.

3.2 Performance characteristics

- High-performance miniature CMOS imager scan engine
- Compact design for simple integration, even in constrained spaces
- Reading of extremely small high-density codes and recording of standard codes in a large reading area using a special optical system
- Reading of shiny surfaces using a gloss reduction process
- Excellent decoding characteristics
- Clearly visible alignment LED
- RS 232 interface, one trigger input, one switching output

3.3   Device construction
1   Integrated LED for illumination (white light)
2   Integrated LED aimer (red light)
3   Center of optical axis
4   12-pin FFC connection (flexible flat cable)
5   Two M1.6 mounting threads, 3 mm deep

Fig. 3.1:   DCR50M2/R2-S7 device construction

3.4   Connection technology

12-pin FFC connection (flexible flat cable)

4 Mounting

The scan engine can be attached at two M1.6 through-hole mounting tabs.

In addition, two 3 mm deep inserts for M1.8 self-tapping screws are provided on top of the scan engine.

4.1 Selecting a mounting location

NOTICE
The size of the code module influences the maximum reading distance and the width of the reading field. Therefore, when selecting a mounting location and/or the code label, take into account the different reading characteristics of the scanner with various code modules.

NOTICE
Observe when choosing the mounting location!
↻ Maintaining the required environmental conditions (temperature, humidity).
↻ Possible soiling of the reading window due to liquids, abrasion by boxes, or packaging material residues.
↻ Lowest possible chance of damage to the scanner by mechanical collision or jammed parts.
↻ Possible extraneous light influence (no direct sunlight).

The best read results are obtained when

- the reading distance lies in the middle of the reading field.
- there is no direct sunlight and extraneous light is avoided.
- the barcode labels are of good print quality and have good contrast ratios.
- you do not use high-gloss labels.
- the barcode or Data Matrix code is moved past the reading window with an angle of rotation of 10° to 15°.
- the red light beam is narrowed down for its respective reading task in order to avoid reflections on shiny components.

NOTICE
The front beam exit of the device is almost vertical to the optics. The code label must be rotated by > 10° to avoid a total reflection of the red light beam in the case of glossy labels.
α	Azimuth angle
β	Angle of inclination
γ	Angle of rotation
	Recommended angle of rotation: γ > 10°

Fig. 4.1: Definition of the reading angles

5 Electrical connection

⚠ CAUTION
Safety notices
♨ Before connecting the device, be sure that the supply voltage agrees with the value printed on the name plate.
♨ Connection of the device and maintenance work while under voltage must only be carried out by a qualified electrician.
♨ The power supply unit for the generation of the supply voltage for the device and the corresponding connection units must have a secure electrical insulation according to IEC 60742 (PELV). For UL applications: only for use in class 2 circuits according to NEC.
♨ If faults cannot be cleared, the device should be switched off and protected against accidental use.

5.1 Voltage supply

The scan engine is designed for connection to a 3.3 V supply voltage.

- +3.3 V DC (pin 2)
- GND (pin 3)

A modular adapter unit MA-DCR50-S7 (50151531) serves as a device-to-host interface for connection to a PC for evaluation. The adapter unit has an LED buzzer, trigger button, 12-pin FFC and micro USB port (see chapter 12.2 "Accessories").

With the modular adapter unit MA-DCR50-S7, a 50 mm long interconnection cable can be contacted via the scan engine's 12-pin FFC and connected to the PC via USB.

A 5 V power supply via micro USB is possible with the modular adapter unit MA-DCR50-S7.

5.2 Pin assignment

Tab. 5.1: Pin assignment

Pin	Signal	Description
1	NC	Not connected
2	VIN	3.3 V DC
3	GND	Ground
4	RxD	Serial input RS232
5	TxD	Serial output RS232
6	D-	USB D- differential data signal
7	D+	USB D+ differential data signal
8	NC	Not connected
9	BPR	Beeper
10	DLED	Good Read LED
11	NC	Not connected
12	TRIG	Trigger

5.3 Switching input / switching output

The scan engine has a switching input and a switching output.

- The switching input is used to trigger the code reading (TRIG).
- The switching output signals successful code reading (DLED).

5.3.1 Switching input

A read process can be triggered using the trigger input (pin 12) in the standard setting (low = active) via the connection to GND (pin 3). We recommend wiring a 3.3 kΩ pull-up resistor as a defined cable termination.
Fig. 5.1:   Wiring example of the trigger input

5.3.2 Switching output

The following switch is used to control an external LED to display the read status. When the scan engine has successfully read a code, pin 10 outputs a pulse with a duration of 100 ms (low = active).
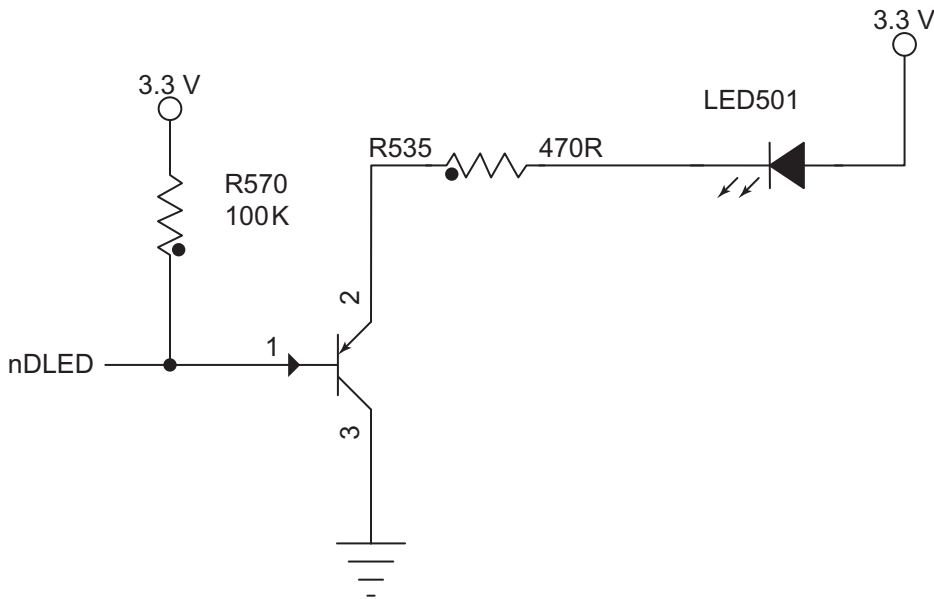

Fig. 5.2:   Switching output

NOTICE
Maximum loading of the switching output
Do not load the switching output of the scan engine with more than 8 mA at +3.3 V DC.

Buzzer switch (external)

Pin 9 is the input signal (PWM) for the external buzzer.
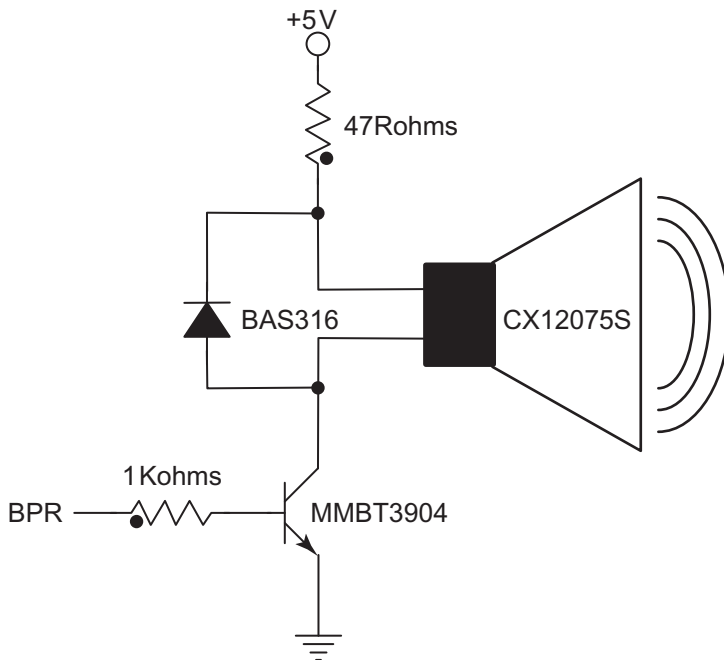

Fig. 5.3:   Buzzer connection

5.4   PC or terminal connection

Via the serial interface, you can configure the scan engine by means of a PC or terminal. For this, you need an RS 232 connection that establishes the RxD, TxD and GND connections between PC and scan engine.

The RS 232 connection can be established in the following ways:

- Direct connection of the plug connector of the scan engine to the PC or terminal via its own connector.
- Connection via a MA-DCR50-S7 modular adapter unit

    To simplify the connection of the connection wires to the PC interface, a modular adapter unit (MA-DCR50-S7) is available to convert the 12-pin FFC to micro USB (see chapter 12.2 "Accessories").
1	Position scan engine DCR50M2/R2-S7
2	12-pin ZIF connection plug for the scan engine
3	Trigger button
4	Green LED, Good Read
5	Red LED, supply voltage
6	Buzzer, sounds for Good Read
7	USB-UART bridge IC
8	Micro USB (virtual ComPort)
9	Micro USB (HID)

Fig. 5.4:   Connection options for the MA-DCR50-S7 modular adapter unit

5.5 Cable lengths and shielding

The maximum cable length is 100 m.

If cables are extended, ensure that the cables of the RS 232 interface are shielded.

5.6 Earthing

It is important to comply with the following electrostatic earthing procedure to ensure EMC (electromagnetic compatibility) and avoid possible damage due to electromagnetic interference.
A   Electrical connection between mounting bracket and PE potential not permitted.
B   Electrical connection between GND (-) 3.3 V DC and the housing of the IVD device is not permitted.
C   An electrical connection between GND (-) 3.3 V DC and the mounting bracket is permissible.
D   IDV machine housing
E   AC/DC – AC/DC (SELV or non-SELV) housing
F   DC/DC – DC/DC housing
G   Mounting bracket
H   Housing insulation

Fig. 5.5:   IVD machine: not isolated (non-SELV – Safety Extra Low Voltage)

5.7 Requirements for the window (transparent cover for the scan engine)

Size of window
A   Target LED
B   Illumination

Fig. 5.6:   Window size

Position of window

The transparent cover should be dimensioned and positioned in such a way that any frame does not restrict the field of vision or cause reflections from the target LED or the illumination.
a   Distance from window

b   Width of window

c   Parallel window

Fig. 5.7:   Window position

The distance between the front of the housing and the furthest surface of the window should not exceed the dimension a+b (a ≤ 0.1 mm, b ≤ 0.1 mm).

Window material

The window material must be transparent. Many materials are prone to stresses and deformations that can affect the optical module and reduce the scan module's performance. PMMA, ADC and chemically hardened glass are therefore recommended.

6 Starting up the device - Configuration

6.1 Measures to be performed prior to the initial commissioning

	NOTICE
❗	↳ Please observe the notices for device arrangement, see chapter 4.1 "Selecting a mounting location".
	↳ If possible, always trigger the scanner with the aid of commands or an external signal transmitter (photoelectric sensor).
	↳ Before commissioning, familiarize yourself with the operation and configuration of the device(s).
	↳ Before connecting the supply voltage, recheck all connections and ensure that they have been properly made.

6.2 Starting the device

6.2.1 Interface

Proper function of the interface can be most easily tested in service operation using the serial interface with the configuration software and a laptop computer.

6.2.2 Online commands

Using the online commands, important device functions can be checked, e.g. reading activation.

6.2.3 Problems

If a problem occurs that cannot be rectified even after checking all electrical connections and settings on the devices and on the host, contact your responsible Leuze subsidiary or Leuze customer service; see chapter 10 "Service and support".

6.3 Setting the communication parameters

The code type and code length are usually set via the configuration software.

7 Configuration control

7.1 Configuration command architecture

The device only accepts the configuration commands for changing and saving configuration settings in the following format.

Tab. 7.1: Command format

Data length	Transmitting terminal	Identity code	Command	Data	High-byte checksum	Low-byte checksum
1 byte	1 byte	1 byte	1 byte	Max. 32 bytes	1 byte	1 byte

Meaning/content of the command components:

Data length	Without the checksum length
	• Minimum: 5 bytes
	• Maximum: 36 bytes
Transmitting terminal	• 57 (HEX): the end terminal transmits data to the decoding device.
	• 52 (HEX): the decoding device transmits data to the end terminal.
Identity code	Command identity
Command	Setting / read command
Data	Configuration data
Checksum calculation	0x10000 – [Data length] – [Transmitting terminal] – [Identity code] – [Command] – [D1 + D2 +D3 + …]

7.2 Supported commands

Error message	Activate	05	57	A1	0E	01	FE	F4
	Deactivate	05	57	A1	0E	00	FE	F5

When a terminal transmits an instruction to a device, the device sends back the following message so that the terminal can determine whether the instruction was successful or failed.

If the command set is **successful**, the decoding device sends the following 5-byte data in hexadecimal (**ACK**) to the end terminal.

52	A0	EC	FE	74

If the command set **fails**, the decoding device sends the following 5-byte data in hexadecimal (**NAK**) to the end terminal.

52	A0	E0	FE	80

7.2.5 Communication and output

Tab. 7.6: Communication and output

Function		Length (Hex)	Source (Hex)	ExID (Hex)	ExCMD (Hex)	Data (Hex)	High-byte check-sum (Hex)	Low-byte check-sum (Hex)

8 Command protocol

Each device has a clearly defined protocol for communication. The protocol consists of serial commands.

Serial commands

The user usually uses the command protocol when communicating with the device. The illustration shows the unformatted command sequence for sending a command to the device.

Tab. 8.1: Command sequence

Configuration sequence	Reading sequence
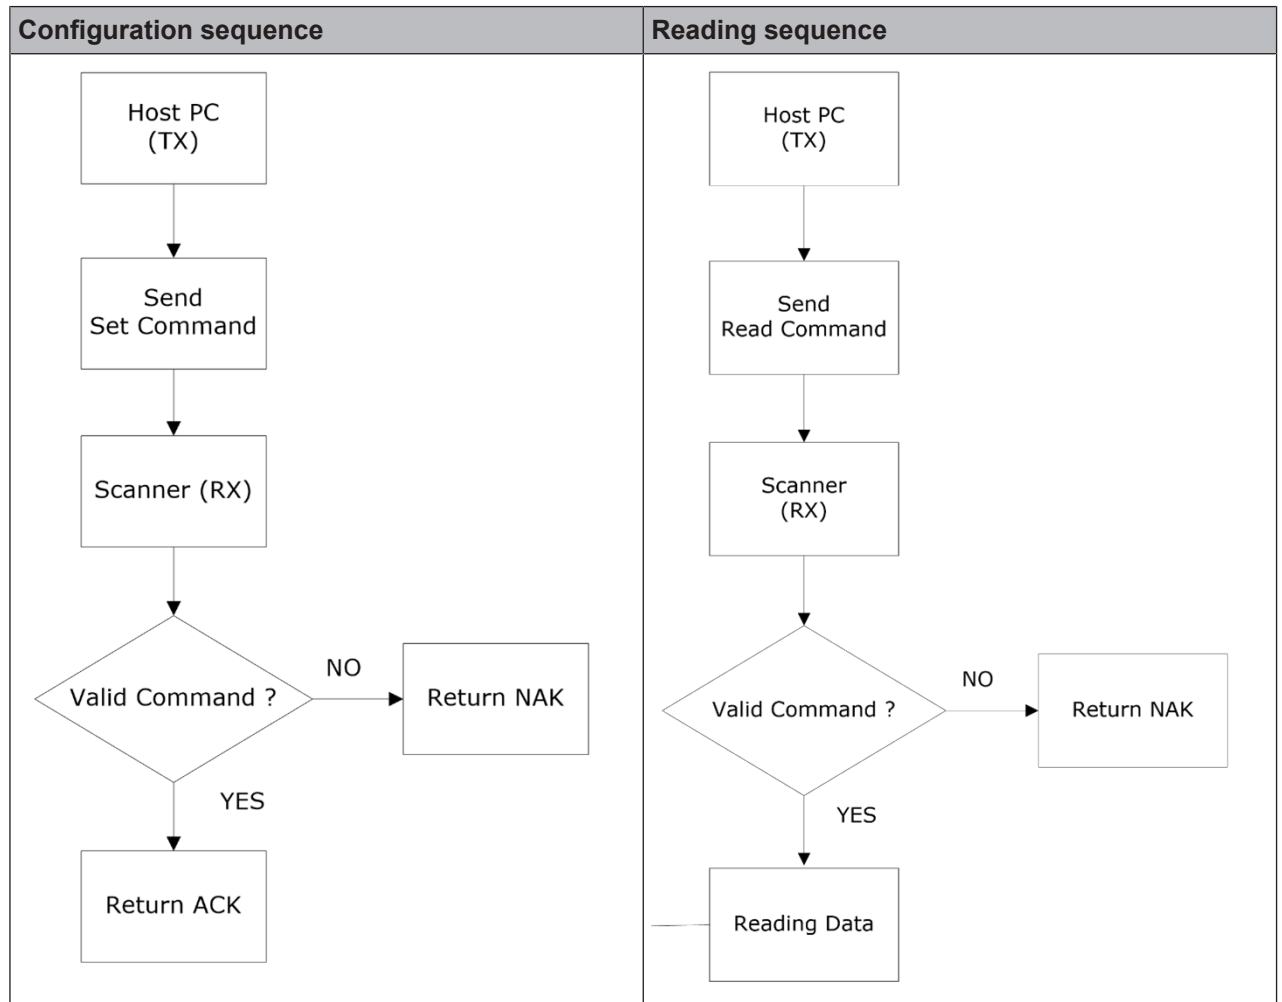

9   Care, maintenance and disposal

Cleaning

Clean the glass window of the device with a soft cloth before mounting.

⚠️	**NOTICE**
	Do not use aggressive cleaning agents!
	✋ Do not use aggressive cleaning agents such as thinner or acetone for cleaning the device.

Maintenance

Usually, the device does not require any maintenance by the operator.

Repairs to the device must only be carried out by the manufacturer.

For repairs, contact your responsible Leuze subsidiary or Leuze customer service (see chapter 10 "Service and support").

Disposing

	NOTICE
🗑️	For disposal observe the applicable national regulations regarding electronic components.

10 Service and support

Service hotline

You can find the contact information for the hotline in your country on our website **www.leuze.com** under **Contact & Support**.

Repair service and returns

Defective devices are repaired in our service centers competently and quickly. We offer you an extensive service packet to keep any system downtimes to a minimum. Our service center requires the following information:

- Your customer number
- Product description or part description
- Serial number or batch number
- Reason for requesting support together with a description

Please register the merchandise concerned. Simply register return of the merchandise on our website **www.leuze.com** under **Contact & Support > Repair Service & Returns**.

To ensure quick and easy processing of your request, we will send you a returns order with the returns address in digital form.

What to do should servicing be required?

⚠	*NOTICE*
	Please use this chapter as a master copy should servicing be required!
	✎ Enter the contact information and fax this form together with your service order to the fax number given below.

11 Technical data

11.1 General specifications

Tab. 11.1: Optics

Optical system	CMOS imager, global shutter (1280 x 960)
Reading field	45 mm … 400 mm, code-dependent
Contrast	Minimum 20%
Resolution	1D code: m = 4 mil, distance-dependent
	2D code: m = 7 mil, distance-dependent
Light sources • Illumination • Alignment LEDs (Aimer)	Integrated LEDs • Visible white light • Visible red light

Tab. 11.2: Code specifications

Code type: 1D	UPC-A, UPC-E, EAN-8, EAN-13, Code 128, Code 39, Code 93, Code 32, Code 11, Codabar, Plessey, MSI, 2/5 Interleaved, 2/5 IATA, 2/5 Hong Kong, 2/5 Straight, Pharma Code, RSS-14, GS1
Code type: 2D	PDF417, MicroPDF417, Data Matrix, QR, Micro QR, Aztec, MaxiCode, Han Xin Code

Tab. 11.3: Interfaces

Interfaces	RS 232, USB (HID; CDC)
Baud rate	9600 … 230400 baud, configurable
Trigger	Switching input • active: 0 V • inactive: +3.3 V or not connected
Switching output	NPN transistor output, max. 8 mA, Good Read, impulse
Buzzer	NPN- transistor output, Good Read, PWM

Tab. 11.4: Electrical connection

Supply voltage	3.3 V DC ± 5%
Current consumption	170 mA ± 10% (typical)
	230 mA ± 10% (maximum)
Standby current	50 mA ± 5%

Tab. 11.5: Mechanical data

Connection type	12-pin FFC connector
Weight	6g
Dimensions (W x D x H)	21.6 x 15.8 x 11.8 mm
Fastening	2 screws M1.6, 2.5 mm deep

Tab. 11.6:   Environmental data

Ambient temperature, operation	0°C … +50°C
Ambient temperature, storage	-40 °C … +70 °C
air humidity	5% … 95% relative humidity, non-condensing
Ambient light	0 … 8,600 Lux (candles)
	0 … 100,000 Lux (direct sunlight)
Electromagnetic compatibility	EN 55022:2006 Class B
Conformity	CE

11.2 Reading field

> **NOTICE**
>
> Please note that the actual reading fields are also influenced by factors such as labeling material, printing quality, reading angle, printing contrast etc., and may thus deviate from the reading fields specified here. The origin of the read distance always refers to the front edge of the housing of the beam exit.

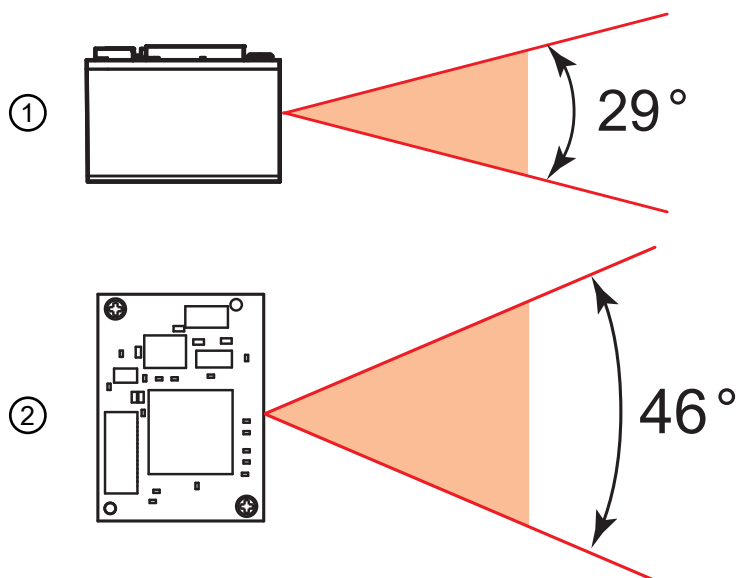

1   Reading field – lateral view
2   Reading field – top view

Fig. 11.1:   Reading fields

Tab. 11.7:   Resolution and reading distance depending on code type

Code type	Resolution [mil]	Typical reading distance [mm]
Code 39 / Code 128	4	50 … 175
EAN-13	13	45 … 400
QR / Data Matrix code	7	60 … 120

11.3   Dimensioned drawings

All dimensions in mm

A   Integrated target LED (red light)

B   Integrated LED for illumination (white light)

C   12-pin FFC (flexible flat cable)

D   Center of optical axis

Fig. 11.2:   DCR50M2/R2-S7 dimensioned drawing

12 Order guide and accessories

12.1 Type overview

Tab. 12.1: Part numbers

Part no.	Part designation	Description
50151528	DCR50M2/R2-S7	Stationary scan engine for 1D and 2D codes

12.2 Accessories

Tab. 12.2: Accessories

Part no.	Part designation	Description
50151531	MA-DCR50-S7	Adapter set

13 EC Declaration of Conformity

The scan engines of the DCR 50 series have been developed and manufactured in accordance with the applicable European standards and directives.

	NOTICE
i	You can download the EC Declaration of Conformity from the Leuze website.
	↳ Call up the Leuze website: *www.leuze.com*.
	↳ Enter the type designation or part number of the device as the search term. The article number can be found on the name plate of the device under the entry "Part. No.".
	↳ The documents can be found on the product page for the device under the *Downloads* tab.
