1 IO link interface

Sensors in the ODT53/55CL1.../L6... variant have a dual channel architecture. Available on pin 4 is the IO-Link interface in accordance with specification 1.1.3 (June 2019) with support of Smart Sensor Profile 1.1 (September 2021) with profile type SSP 4.1.1 (Measuring and Switching Sensor, 1 Channel). You can easily, quickly and economically configure the devices via the IO-Link interface. Furthermore, the sensor transmits the process data via the IO-Link interface and makes diagnostic information available through it.

In parallel with the IO-Link communication, the sensor can output the continuous switching signal for object detection on pin 2 (SSC.2 by default) by means of the dual channel architecture. The IO-Link communication does not interrupt this signal.

1.3 Device-specific IODD

At www.leuze.com in the download area for IO-Link sensors you will find the IODD zip file with all data required for the installation.

On the IODDfinder platform (<https://ioddfinder.io-link.com/#/>), a central cross-manufacturer database, you can also find the description files (IODDs) of the IO-Link sensors.

1.4 IO-Link parameters documentation

The complete description of the IO-Link parameters can be found in the *.html files. Double-click on a language variant in the directory containing the extracted files:

- German: *IODD*-de.html
- English: *IODD*-en.html

If the html file within the ZIP archive is opened, the image files are not displayed.

↳ Extract the ZIP file first.

1.5 Device-specific information

- This is a device of data storage class 1 (automatic DS), i.e., device exchange is possible without additional measures (such as teaching).
- In the PREOPERATE state, this device uses TYPE_0.
- Changes to the transferred PDOOut information are ignored if they are marked as invalid. On the sensor side, the replacement value 0 is assumed.
If the device was previously activated, it thus remains activated.
If the device was previously deactivated, it changes to the activated state.
- If there is a lack of communication, the last setting (activation or deactivation) remains unchanged.

Fundamentals:

- IO-Link Interface and System Specification Version 1.1.3, June 2019
- IO-Link Test Specification Version 1.1.3 January 2021

2 Functions configurable via IO-Link

PC configuration and visualization is performed conveniently with the USB-IO-Link Master SET MD12-US2-IL1.1 (part no. 50121098) and the *Sensor Studio* configuration and diagnosis software (in the download area of the sensor at www.leuze.com).
